SIMPLE SET III[®]

SIMPLE SET III[®]

SimpleSET locks into the pin holes of three units.

SimpleSET brings them to alignment.

Three units are moved into place with operator guidance.

AN INVALUABLE TOOL

This tool is used for everyday installation. The Keystone SimpleSET allows for three units to be placed simultaneously. It is cost effective, reliable, light, and simple to use. It is extremely valuable for everyday installation with front and back of wall access, as well as in tight area situations. With the SimpleSET you can lift more than one type of Keystone unit with ease and precision.

Application uses:

- DOT Projects
- Commercial Projects
- Residential Projects
- Fill walls or cut walls

Site Management Advantage:

- Stack from the front or back of wall
- Reach difficult areas with safety and ease
- Allows unit stacking and backfilling operation to occur simultaneously

MANUAL • EFFICIENT • PRECISE

SimpleSET helps reduce the wear and tear of physical labor and saves money because it speeds up installation.

Operation:

The SimpleSET tool is a spreader bar with cables and pins which are configured to suspend from the arm of a track hoe machine or boom equipped skid steer. It is non-hydraulic and can lift units in any pallet layout. It lifts with a friction connection device from the pin holes of either the Keystone Standard or Keystone Compac Units.

Specifications:

Weight: 28 lbs. (empty)

Lifts: Three Standard or Compac Units

Method: Lifts from Pinholes

Pallet Layout: Any
